

Classroom Management

Enhancing Digital Classroom Management for the Modern Learning Environment

Classroom distractions and misuse of digital resources can greatly hinder student engagement and productivity. Educators need a solution that not only provides visibility into student activity but also gives them the control to steer students back on track. The iboss Classroom Management capability, integrated within the iboss Zero Trust SASE platform, offers real-time insight and control over student devices, whether they are learning on campus or remotely.

iboss Classroom Management integrates seamlessly with Google Classroom, allowing teachers to manage assignments and online behavior from a single interface. This integration enhances both the teaching workflow and the security of the classroom environment, making it easier for educators to focus on instruction while ensuring students remain on task.

Key Capabilities

Live Monitoring and Control

Teachers can view and control student activity instantly to keep classrooms focused.

Multi-Device Support

Manage learning on Chromebooks, Windows, and macOS devices from one platform.

Google Classroom Integration

Direct integration with Google Classroom simplifies the workflow for teachers.

Empowering Educators with Real-Time Insights and Control

Challenge

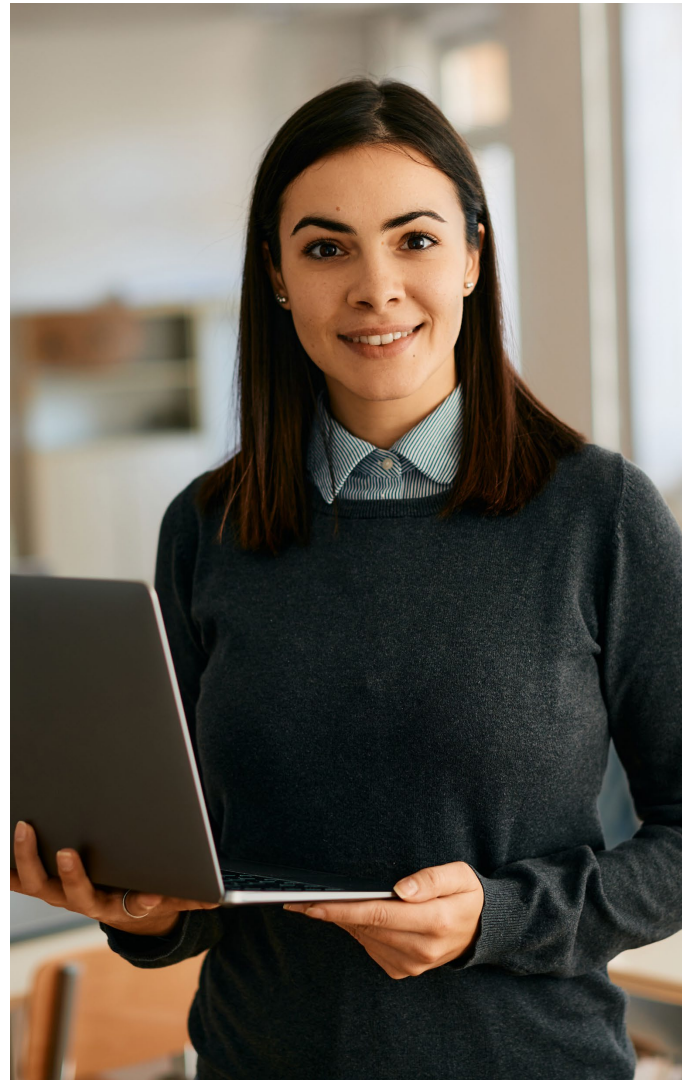

Maintaining student focus during lectures or assignments can be difficult, especially when students have access to multiple online distractions. Educators need a way to ensure that students are engaging with the assigned materials, rather than playing games or browsing unrelated content.

Solution

iboss Classroom Management allows educators to visually monitor all students' screens from a single page, with images that refresh automatically to stay up to date. Teachers can also view a list of open browser tabs and remotely close any distracting tabs. The iboss Zero Trust SASE platform enables this monitoring from any location, allowing teachers to manage classroom behavior seamlessly whether in-person or remote.

Benefit

By gaining real-time insight into student activities and having the ability to close browser tabs without interrupting the class, teachers can ensure that students stay focused on their work. This enhances engagement and productivity, whether students are in-class or remote.

Expanding Classroom Management Across All Devices

Challenge

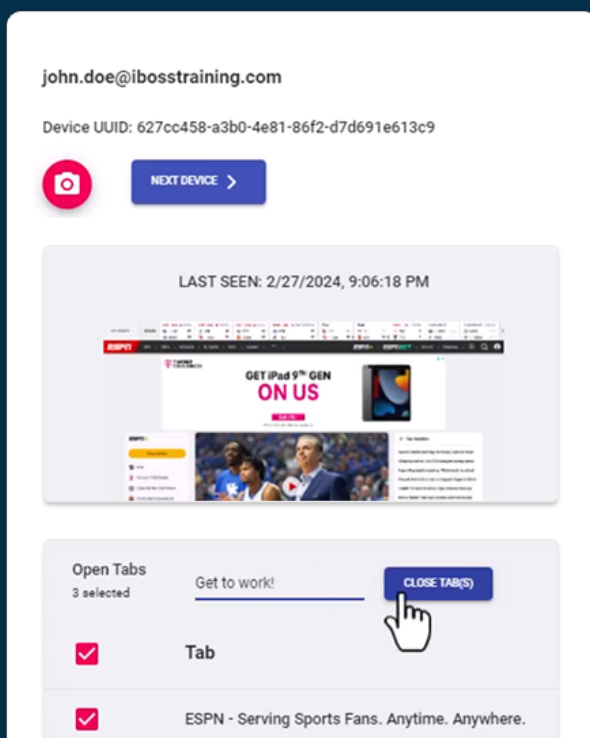

Managing students using different devices like Chromebooks, Windows, and macOS can make it difficult to ensure consistency in learning environments.

Solution

The iboss Zero Trust SASE platform seamlessly integrates with Google Classroom, extending its reach beyond Chromebooks to Windows and macOS devices. This ensures a unified experience for managing student activities across all platforms, whether on-campus or remote.

Benefit

With multi-device support, iboss provides consistent classroom management regardless of the devices students use. This maintains focus and productivity across any platform or location.

Features

Streamlined Google Classroom Integration

Integrates effortlessly with Google Classroom to simplify digital class management and student monitoring.

Multi-Device Support

Manage student activities seamlessly across Chromebooks, Windows, and macOS devices.

Flexible Classroom Management

Assign multiple teachers to a single classroom or one teacher to multiple classrooms, allowing for easy collaboration and oversight.

Real-Time Activity Monitoring

Get immediate visibility into student online behavior with live screen updates and activity tracking.

Historical Activity Logs

Review detailed logs of past student activities, helping teachers understand student behavior and engagement.

Browser Tab Control

Remotely close distracting browser tabs and send messages to students, maintaining focus without disruption.

URL Broadcasting

Easily send URLs to student devices, allowing teachers to direct students to specific websites or resources instantly.
