iboss

For Education

Automatic Safe Search Enforcement

Automatically enforce safe search settings across search engines and Youtube to get additional protection from content providers

Popular search engines, such as Google and Bing, have safe search settings which will cause the results provided to be pre- filtered for adult oriented content. Typically, users have to configure these settings manually. In educational environments, it's ideal to have these settings automatically turned on so that the results presented by the search engine are CIPA compliant. In addition, forcing these settings to remain on so they cannot be disabled is also ideal to ensure this policy is always in place. The iboss cloud can automatically enable safe search enforcement on popular search engines such as Google, Bing and Yahoo. In addition, safe search enforcement can be applied to Youtube for clean video results.

Enforce safe search on Google, Bing and Yahoo

Ensure Google images are scrubbed prior to search results being displayed

Enforce safe search on Youtube

Enforce safe search on Google, Bing and Yahoo

Safe search can automatically be enabled and forced across popular search engines such as Google, Bing and Yahoo. The setting is enabled automatically and transparently to the user. In addition, enforcing safe search can be enabled on a per-group basis so that staff can have full access to search results when needed. Staff members can also override safe search results on-demand by creating override groups.
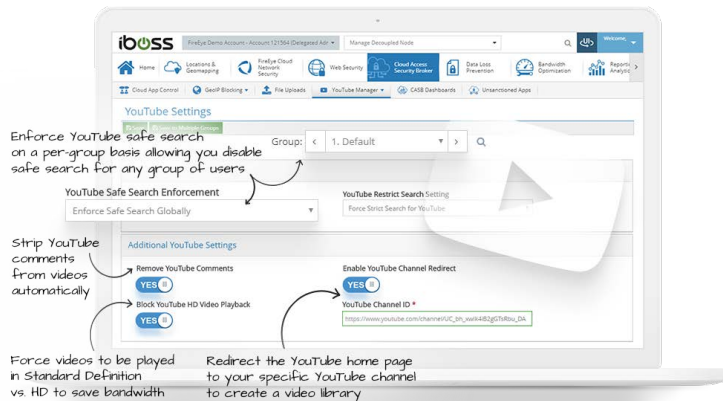

Ensure Google images are scrubbed prior to search results being displayed

Enforcing safe search on Google images allows Google to perform image scrubbing prior to images being returned from a search result. In addition, the iboss cloud will also filter the images against the policies configured so that images that do not meet the policies set are also removed. This gives an extra level of protection beyond safe search enforcement to ensure safe and compliant Internet use.

Enforce safe search on Youtube

Safe search can also be enabled on for Youtube video results. This is critical so that non-compliant videos are stripped from video search results. Safe search enforcement is transparent and also configured on a per-group basis allowing teachers to have full access to all videos. Keyword enforcement can also be applied to prevent unwanted searches to support digital learning and reduce risk.

Enforce YouTube safe search on a per-group basis allowing you disable safe search for any group of users

Strip YouTube comments from videos automatically

Force videos to be played in Standard Definition vs. HD to save bandwidth

Redirect the YouTube home page to your specific YouTube channel to create a video library

Buy Now

The iboss cloud can secure user Internet access on any device, from any location, in the cloud. Best of all, you can start using it immediately to protect your users instantly.

What you get

- In the cloud Internet security
- Advanced Internet malware protection that follows users
- Advanced cloud and SaaS controls
- Web filtering and compliance controls
- Internet security for in-office users without appliances
- Branch office Internet security without data backhaul
- And a lot more…
