

The iboss Platform

CASB Cloud Application Visibility & Controls

The iboss cloud platform delivers the CASB capabilities and features you need to reduce risk while users access cloud applications

The ability to apply fine grained controls and gain visibility into cloud application use is critical with the move of applications to the cloud. The iboss cloud is the gateway to the cloud giving it the ability to control cloud applications and provide visibility into cloud application use. Cloud application controls are extensive and range from Facebook, to Google to Microsoft. This includes making Facebook read-only, ensuring access to Google Drive is corporate only and leveraging Microsoft Office 365 Tenant restrictions.

Control cloud applications such as Facebook, LinkedIn and Twitter to ensure compliance

Extensive Google application controls including YouTube and Google Drive

Gen-3 CASB Protection for Data at Rest Within Cloud Applications

Native Microsoft integration with Microsoft CAS

Control cloud applications such as Facebook, LinkedIn and Twitter to ensure compliance

The iboss cloud includes extensive cloud application controls spanning applications such as Spotify, Pinterest, Facebook, Twitter, LinkedIn, and Search Engines. The policies can be applied on a per user or per group basis to prevent actions such as posting sensitive information to social media sites which violate PCI and HIPAA compliance. In addition, visibility into applications is provided in detailed real-time dashboards and drill down reports. Since iboss cloud lives in the cloud, controls and visibility is applied to all users in regardless location.

Extensive Google application controls including YouTube and Google Drive

Application controls span the suite of Google Apps, including Google Drive. This includes enforcing Safe Search on Google to reduce liability and ensure compliance as well as controls across the vast suite of Google Applications. Applications include Google Cloudprint, Google Trends, Google Research, Google Wallet, Google Maps, Google Translation, Shopping, Google Groups, Google Play, Google Video, Google Sites, Gmail and Google Earth. In addition, Gmail, Google Drive, Google Docs, Google Plus, Google Groups and Goog e Sites can be restricted to only company use by restricting access to the registered G-Suite company domain.

Gen-3 CASB Protection Prevents Data Loss from Shadow IT

The iboss cloud provides the most powerful Gen-3 CASB on the market, ensuring data transfers from devices are controlled and remain within corporate owned cloud accounts. For example, if a user is accessing Office 365 from the office or at home, data transfers from the device are forced into the corporate owned office 365 account. For Google services, such as Google Drive, file uploads can be forced to the organization's Google Drive account instead of a personal use Google Drive account. Slack can also be controlled so that the use of messaging remains within the corporate Slack account. Gen-3 CASB provents data loss and shadow IT by controlling the network data from the device to destinations in the cloud. Gen-3 CASB protects what legacy CASB technology misses by ensuring all network transfers end up in the right place in the cloud.

The iboss cloud platform provides full visibility into cloud application use and access across all users and devices

Whether a user is in the office or working from home, they are always connected through the iboss cloud platform. This ensures full visibility into cloud application use, including access and data transfers. The CASB dashboards are easy to use and provide top cloud applications, top CASB categories, and top cloud application users. Details for cloud application use are broken down to the user detail to determine high risk user activieis and cloud application use. CASB PDF reports can be generated using built-in templates. And best of all, CASB delivered by iboss cloud can be setup in minutes as devices are connected to iboss cloud providing the visibility and control needed to make Gen-3 CASB possible.

Native Microsoft integration with Microsoft CAS

The iboss cloud is natively and extensively integrated with Microsoft. This includes integrations across Office 365, Microsoft Azure, and Microsoft Cloud App Security CASB. The Office 365 integration ensures fast and uninterrupted connections to Microsoft while Microsoft Office 365 Tenant restrictions ensures appropriate access to Office 365. The Office 365 Tenant restriction can be applied on a per-group basis.

In addition, Microsoft CAS integration extends the extensive application controls and visibility provided within the iboss cloud platform to seamlessly include all of the CASB controls within Microsoft CAS. Enabling Microsoft CAS couldn't be easier and only requires enabling the feature and leveraging an existing Microsoft CAS subscription.

The rest is handled by the iboss cloud including sending the necessary user data to Microsoft for processing. In addition, any application sanctioned within the Microsoft CAS platform synchronize automatically with iboss which ensures shadow IT and unsanctioned applications are controlled for users wherever they roam.

Buy Now

The iboss cloud can secure user Internet access on any device, from any location, in the cloud. Best of all, you can start using it immediately to protect your users instantly.

What you get

- In the cloud Internet security
- Advanced Internet malware protection that follows users
- Advanced cloud and SaaS controls
- U Web filtering and compliance controls
- Internet security for in-office users without appliances
- Branch office Internet security without data backhaul
- And a lot more...
