

# Improve Student Safety with iboss and Gaggle

## The Challenge: Provide Comprehensive Student Safety

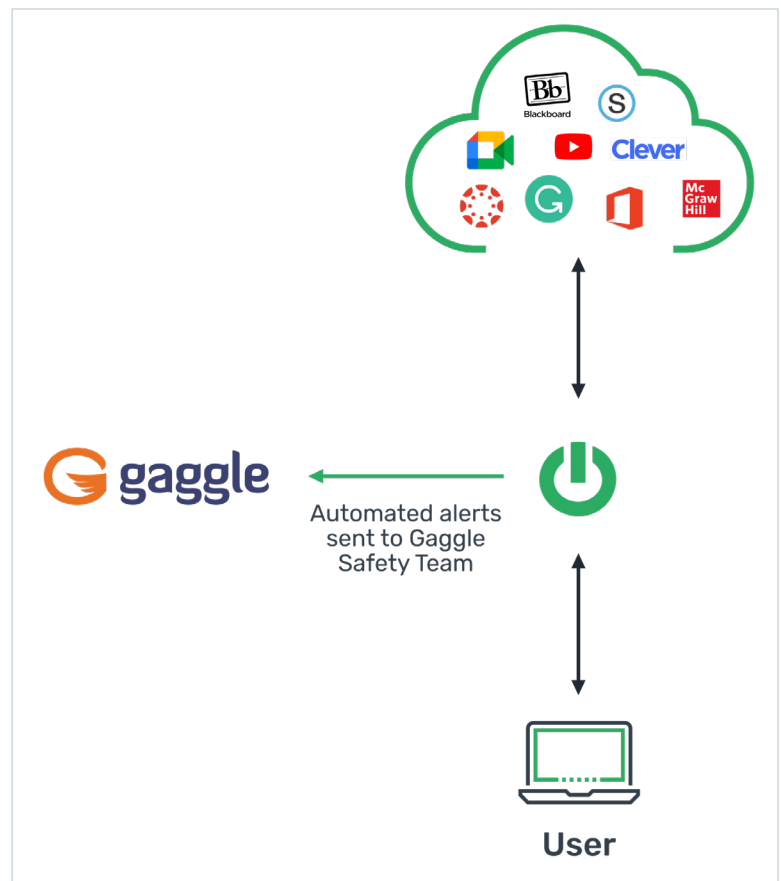

Providing student safety requires identification, fast review, and analysis of high-risk student web behavior to identify potential threats. School staff can't handle the need and volume on a 24/7 basis and high-risk student activity is not always constrained to activities performed on campus.

## The Solution: iboss integration with Gaggle Safety Management

The iboss Zero Trust Edge follows the student and their school-provided devices to always ensure connectivity and security. As a result, iboss provides visibility to high-risk activities while the student is off-campus and at home. This "always-on" filtering is critical to providing the visibility needed to prevent tragedies on campus and create the investigative reports necessary to deal with high-risk circumstances. The Gaggle integration serves to further enhance these capabilities.

iboss Zero Trust Edge's integration with Gaggle Safety Management speeds the review of any search terms or keywords flagged by iboss. When iboss flags a student's internet search for words that may signal potentially dangerous or harmful behavior, an alert is sent to the Gaggle Safety Team, who will review it and determine if it should be forwarded to the school or district. If the team classifies it as a questionable content search, the alert will be emailed to the school or district. If the alert shows an imminent threat to the student's life or well-being, the Gaggle Safety Team will immediately notify the district's specified contact by phone.

This integration with iboss empowers districts with a stronger digital safety net to protect students on and off-campus. The iboss cloud monitors and protects student web traffic no matter where they connect from or what websites or applications they access. The integration with Gaggle enhances iboss' value by eliminating the pressure and workload on IT administrators and staff, resolving the need to manage false alerts, review items at night and on weekends, or worry about overlooking potential issues with life-threatening consequences. Leveraging this new capability is simple and only takes a few minutes.

#### The Gaggle Safety Team classifies concerning issues as:

- Curriculum-related search (no action needed)
- Questionable content (district emergency contacts receive an email alert)
- Possible student situation (immediate phone call to district emergency contacts)

### Integrated Solutions Benefits

- Constant filtering and monitoring of student web traffic by iboss for students using a school-issued device, no matter where they connect to the internet.
- 24x7 analysis and response by Gaggle to risks made visible by iboss.

### About Gaggle

Since 1999, Gaggle has been the leader in helping K-12 districts manage student safety on school-provided technology. Using a powerful combination of artificial intelligence and trained safety experts, the safety solution proactively assists districts 24/7/365 in the prevention of student suicide, bullying, inappropriate behaviors, school violence, and other harmful situations. Most importantly, Gaggle continues to help hundreds of districts avoid tragedies and save lives, while also protecting their liability. During the 2021–22 academic year, Gaggle helped districts save the lives of 1,548 students who were planning or actively attempting suicide.

## About iboss®

iboss is a cloud security company that enables organizations to reduce cyber risk by delivering a Zero Trust service designed to protect resources and users in the modern distributed world. Applications, data and services have moved to the cloud and are located everywhere while users needing access to those resources are working from anywhere. Built on a containerized cloud architecture, iboss delivers security capabilities such as SWG, malware defense, browser isolation, CASB and data loss prevention to protect all resources, via the cloud, instantaneously and at scale. This shifts the focus from protecting buildings to protecting people and resources wherever they are located. Leveraging a purpose-built cloud architecture backed by 230+ issued and pending patents and more than 100 points of presence globally, iboss processes over 150 billion transactions daily, blocking 4 billion threats per day. More than 4,000 global enterprises trust the iboss Cloud Platform to support their modern workforces, including a large number of Fortune 50 companies. iboss was named one of the Top 25 Cybersecurity Companies by The Software Report, one of the 25 highest-rated Private Cloud Computing Companies to work for by Battery Ventures, and CRN's top 20 Coolest Cloud Security Companies of 2022.
