

Gaggle Safety Management for iboss

Provide Comprehensive Student Safety

Gaggle's integration with iboss empowers districts to provide a stronger digital safety net to protect students on and off campus. This comprehensive approach to student safety eliminates the pressure and workload on IT administrators and staff, resolving the need to manage false alerts, review items at night and weekends, or worry about overlooking potential issues with life-threatening consequences.

Gaggle Safety Management for iboss

When iboss flags a student's internet search for words that may signal potentially dangerous or harmful behavior, an alert will be sent to the Gaggle Safety Team, who will review it and determine if it should be forwarded to the school or district. If the team classifies it as a questionable content search, the alert will be emailed to the school or district. If the alert shows an imminent threat to the student's life or well-being, the Gaggle Safety Team will immediately notify the district's specified contact by phone.

The Gaggle Safety Team classifies concerning items as:

- Curriculum-related search (no action needed)
- Questionable Content (district emergency contacts receive email alert)
- Possible Student Situation (immediate phone call to district emergency contacts)
